

Comark Corporation announces expansion of EnduraShock Military Operator Interface Panels.

Medfield, MA. January 22, 2009 – Comark Corporation, a leader in the design and manufacture of ruggedized custom computer solutions for the marine and military markets, today expanded its portfolio of MIL qualified computer and display products by announcing the availability of the EnduraShock™ 1900 Operator Interface Panel.

The EnduraShock 1900 is a bulkhead-mounted modular computer and display unit designed to meet military specifications. The display is a 250 NIT, 19" diagonal LCD. An optional 1000 NIT LED backlit LCD is available for sunlight readability. Both display options are available with resistive touchscreens. The computer portion is available with a range of processors from Intel Celeron M to Core 2 Duo and system memory up to 4 GB RAM. Mass storage options include solid-state flash, rotating hard drives, or both. Networking can be configured as either MIL copper or dual fiber interfaces, up to Gigabit Ethernet. The enclosure is a hard mounted, low profile structure, which allows flexible cabling options from the top or bottom, ease of installation and service, and protection against falling water.

This EnduraShock 1900 is designed to meet MIL-901D for shock, MIL-167 for vibration, MIL-461E for emissions and MIL-810 for temperature and humidity. Final approval is expected in the spring of 2009. All electronics are conformal-coated to protect against corrosion. "The EnduraShock 1900 is a great solution for military computer applications where cost is a major factor and a fully sealed system is not a requirement," *said Steve Schott, President.*

About Comark Corporation

Comark Corporation is a designer and manufacturer of high-performance, ruggedized computer solutions for military, mobile, building automation, kiosk, digital signage and industrial automation market segments. The Company is driven by innovation and over 30 years of expertise in designing custom, high-performance computers and displays. Seamless integration with state-of-the-art software and network applications deliver dynamic solutions engineered for customer-specific requirements.
